

Chromebook Wireless Detailed Setup Guide

To connect your Chromebook to the MCC-Wireless network, follow the steps below.

1. Click the network icon  in the lower-right corner of your screen.
2. Select your network status from the menu that appears.
3. Select **Join other...** in the lower-left corner.
4. Select **Advanced** in the lower-left corner.

Join Wi-Fi network

SSID: MCC-Wirless

EAP method: PEAP

Phase 2 authentication: Automatic

Server CA certificate: Do not check

User certificate: None installed

Identity: MCC UserId

Password: *****

Anonymous identity:

Save identity and password

Share this network with other users

Connect Cancel

ConfigurationSettings for MCC-Wireless:

- **SSID:** MCC-Wireless
- **EAP Method:** PEAP
- **Phase 2 authentication:** MSCHAPv2
- **Server CA Certificate:** Do not check
- **User Certificate:** None Installed
- **Identity:** MCC ID
- **Password:** MCC Password
- **Anonymous Identity:** Empty

5. Click **Connect**.

When / if the Chromebook does not connect:

6. Check the box to make MCC-Wireless an automatically connect network

7. Click Connect to MCC-Wireless

8. Let it attempt to connect repeatedly until it finally connects, during this time you likely will receive DHCP Lookup Failure errors that you should ignore. Those errors are actually a good sign however as it demonstrates it is trying to connect.

Let the Chromebook keep attempting to connect to MCC-Wireless and eventually it will assuming the credentials and configuration are correct. Sometimes it will connect immediately and more often it will connect in 10-20 minutes so keep trying.

The "trick" seems to be to keep the Chromebook from connecting to other networks and eventually it will connect to MCC-Wireless. It may take several (over many minutes) iterations but it will connect. After it finally gets connected subsequent connections seem to be more readily done and because your credentials are stored.
